- From: Will Tanna, Team Leader
- Subject: Team Bits Fourth Group Project Report

Work Completed:

1. Last Saturday we had our 8 hour meeting and wrote out the pseudocode of how we were going to go through the whole program with the MOVE command.
2. Igor and Himanshu worked on I/O and it is now saving the starting and ending addresses into the correct address registers for OP code to start working
3. OP code has been started, as well as EA
4. An extensive, detailed flow chart has been created from our psuedocode that we created on Saturday (Next page)

Problems:

No problems this week, just little bugs here and there in the program that we had to figure out.

Work Scheduled:

1. Complete OP code for MOVE command this weekend
2. Start and complete EA for MOVE command this weekend, if not early this week
3. Once MOVE is 100% done OP code will focus on writing the functions for all the other instructions
4. EA will do the same

Self Evaluation:

Our group has worked extremely hard this week with the time that we have. With the MOVE command getting completed this weekend we hope to have most of the program done within a week so we can do heavy testing a week before it is due.

Detailed Flow Chart. Picture order is page order (First picture is page 1, etc)
